

ABOUT DUE DILIGENCE

Customers, governments and civil society organisations increasingly expect companies to do business with respect for people and planet. Companies are demanded to identify, prevent and reduce ESG risks in their supply chain; both upstream and downstream. This is also called 'due diligence' or 'ESG risk management' and can consist of the following steps:

1. The formulation of an ESG strategy.
2. Mapping your value chain.
3. Performing a risk assessment and prioritizing the risks.
4. Collaborating with value chain partners to address risks, as well as monitoring and communicating about your policies and progress.

Due diligence is becoming mandatory through legislation, varying per country. It is essential to integrate it throughout your organization: your management systems, policies and procedures.

OECD GUIDELINES AND UN GUIDING PRINCIPLES AS A BASIS

The [OECD Guidelines](#) and the [UN Guiding Principles](#) are the most widely accepted international guidelines that explain to companies how to perform ESG due diligence in their value chains. The OECD Guidelines are endorsed by 35 governments worldwide and offer a framework for companies to deal with sustainability issues such as child labour, environment and corruption. These governments expect companies with international business activities to operate in accordance with them. The recommendations of the OECD guidelines apply where local rules and regulations, or enforcement of these, do not suffice. It is important that companies know the social and environmental risks in their value chain, and take mitigating measures. Stakeholders can report suspected violations of the OECD guidelines to the National Contact Point in their respective country. The UN Guiding Principles distinguish the state's duty to protect human rights, the responsibility of companies to respect human rights, as well as the provision of access to effective remedy. Based on these three pillars of the UNGPs, more than twenty national action plans on business and human rights (NAPs) have been developed so far.

OECD Guidelines

Endorsed by 35 governments worldwide, providing a comprehensive framework for companies to address sustainability issues including child labor, environment, and corruption.

UN Guiding Principles

Three pillars framework: state duty to protect human rights, corporate responsibility to respect human rights, and access to effective remedy.

About US

Sustainability consulting and AI-powered intelligence

■ MSC HK

MSC HK is a sustainability strategy firm rooted in China and oriented toward the world. We drive the transition to a sustainable economy through providing consulting services to our global enterprise clients.

With a decade of experience, we integrate strategic thinking with practical execution, working alongside global enterprises to redefine growth—toward a future that is sustainable, intelligent, and globally connected, powered by Chinese insight.

■ Future Vision

Future Vision is an AI-powered business and sustainability intelligence assistant that helps entrepreneurs explore future business opportunities for sustainable growth.

Through Future Vision, executives can monitor ESG risks, track competitor insights and global business updates in real time, and connect with global organizations and expert networks.
